

Emergency and Critical Incident Policy and Procedure

Purpose and Scope

Emergencies and critical incidents in the workplace can affect people physically and psychologically, and affect continuity of What if Y not Everything, Inc..

The purpose of this policy is to ensure What if Y not Everything, Inc., its franchises, and subsidiaries prepares for and effectively responds to emergency situations and critical incidents through the appropriate use of resources. The prevention and effective management of emergency situations and critical incidents can assist to minimise the negative impact of an unexpected event.

This policy applies to all staff, directors, customers, volunteers, and Board members.

Definitions

An emergency is an unplanned or imminent event that affects or threatens the health, safety or welfare of people, property and infrastructure, and which requires a significant and coordinated response. The defining characteristic of an emergency event or situation is that usual resources are overwhelmed or have the potential to be overwhelmed.

Emergencies may be a specific event with a clear beginning, end and recovery process, or a situation that develops over time and where the implications are gradual rather than immediate.

Emergency management is the coordination of an emergency response and management of recovery. The aim of emergency management is to minimize physical and psychological impacts on all parties and to minimize damage to assets, operations, reputation and staff productivity.

A critical incident is an unexpected traumatic event, involving personal or professional threat, which evokes extreme stress, fear or injury. Providing appropriate supports following a critical incident is part of emergency management.

A traumatic event is one in which a person experiences, witnesses or is confronted by experiences that involve actual, threatened or perceived death or serious injury and/ or threat to own or others physical and emotional integrity. The person's response may then include intense fear, feelings of helplessness and horror, which impact on their sense of 'self'.

Complex trauma refers to a condition resulting from multiple exposures to one or more traumas. When repeatedly exposed to traumatic stress, disruptions can occur in brain structure and function, central and autonomic nervous system arousal, endocrinological and immunological function. These biological disruptions interact with psychological, emotional, cognitive and spiritual processes.

Critical Incident Debriefing (CID) is a preventative health measure to minimise the impact of traumatic events and the development of major psychological health problems such as Post Traumatic Stress (PTS) Disorder.
